### Aim of the Workshop

---

Eight years after the introduction of Dual VET in Spain, the Ministry of Education and Vocational Training (VET) aims to take stock of the outcomes of the current system, analyse the pros and cons of the different implementation modes proposed in each region and in different EU countries (including The Netherlands), and estimate the potential and the needs of specific economic emergent sectors, to eventually identify common quality benchmarks.

In order to achieve this ambitious goal, the Ministry requested the support of the Structural Reform Support Service (today, DG Reform) from the European Commission. The request was approved in 2017 and the Project started in 2019 (with 2 years of duration), counting on the technical assistance of Fundación Bertelsmann.

The main purpose of the Project is to reach a consensus among the main stakeholders on a coherent quality framework that would allow the design and implementation of a quality control system for Dual VET project aligned to European standards and specifically the recent adopted *Quality Framework for Apprenticeships*.

Within the Project's framework, this Workshop will take place in order to provide the regional authorities and the Spanish Ministry of Education and VET concrete good practices, challenges attached to practical implementation and opportunities of the Dutch Dual VET model, according to the use of the [European Framework for Quality and Effective Apprenticeships of the European Commission](#) (link in Spanish [here](#)).

### List of participants:

---
